Individuals Can Download Proof of their Negative COVID-19 Test Result on the State's Excelsior Pass [Here](#)

Public-Private Partnership First Announced in Governor's 2021 State of the State to Make Low-Cost Rapid Testing Available for Enhanced Economic Activity

Learn More About New York Forward Rapid Test Program and Find a Test Site [Here](#)

Governor Andrew M. Cuomo today announced an expansion of the New York Forward Rapid Test Program to help businesses and events safely reopen, with 25 new sites open Thursday, April 1 and 10 sites opening within the next two weeks for a total of 70 sites statewide.

This unique public-private partnership -- first announced in the Governor's 2021 State of the State: Reimagine | Rebuild | Renew and launched in February -- makes low-cost rapid testing available to the public to support enhanced economic activity as the State continues to reopen sectors of the economy. New Yorkers can find a test site and make an appointment [here](#), and download proof of their negative test result on the State's [Excelsior Pass](#), which launched last month.

"I have stressed many times that testing is a key part of reopening our economy and by expanding our New York Forward Rapid Test Program we can be even more confident in our metrics and tracing capabilities," **Governor Cuomo said.** "These new rapid testing sites will be invaluable tools for communities and businesses because they

will provide an additional layer of protection as New Yorkers return to their economic activities."

Several of these sites will open nearby or at arenas, stadiums, and venues, complementing the State's reopening guidance, which allows professional sports competitions with fans and other entertainment events to resume if all attendees present proof of a recent negative COVID-19 test or immunization, as well as follow additional health and safety protocols, including social distancing, face coverings, and health screening.

The New York Forward Rapid Test Program aims to dramatically expand access to rapid testing to allow businesses, professional sports, and entertainment venues to more safely re-open. The network accompanies State guidance that increases capacity limits contingent upon attendee proof of a recent negative test or immunization, including professional sports competitions in major stadiums and arenas, which were permitted to resume on February 23; wedding receptions and catered events, which were permitted to resume on March 15; regional sports venues that hold 1,500 people indoors or 2,500 people outdoors, which are permitted to re-open beginning Thursday, April 1; and performing arts and entertainment venues, which are permitted to reopen beginning Friday, April 2.

Empire State Development Acting Commissioner and President & CEO-Designate Eric Gertler said, "The expansion of the New York Forward Rapid Testing Program comes as more and more New Yorkers become eligible for vaccines. We still have a responsibility to be cautious and observe all recommended health guidelines, as New York State continues to support businesses by providing the tools needed for a safe and sustainable reopening of the Empire State economy."

Testing providers participating in the network must make rapid testing available for no more than \$30, provide participants with their results within 30 minutes, offer a mechanism for people to schedule in advance and report the results to the State. To reduce the cost of testing for New Yorkers and expand the number of sites, the State is providing access to Abbott BinaxNow tests at cost to some providers and working with the Real Estate Board of New York, Business Improvement Districts and other partners across the state to identify vacant spaces in commercial centers that can be donated for the testing network.

Individuals who are not experiencing COVID symptoms and that have not had a recent known exposure to COVID-19 may participate in this initiative by visiting participating locations and completing a questionnaire. Individuals must continue to comply with all New York Forward guidelines on reopening, including but not limited to the use of face coverings, social distancing, and other protocols.

Testing at the new and existing sites will be operated by BioReference Laboratories, Clarity MedHealth, Quest Diagnostics and Rapid Reliable Testing.

To find participating sites in this initiative and to make an appointment, visit the program [website](#).

The following new test locations will be open Thursday, April 1:

- BioReference, 63 Columbia Street, Albany, NY
- BioReference at CVS Pharmacy, 373 Willis Avenue, Roslyn Heights, NY
- BioReference at CVS Pharmacy, 640 Franklin Ave, Valley Stream, NY
- BioReference at CVS Pharmacy, 480 Montauk Highway, Bay Shore, NY
- BioReference, 3 Times Square, New York, NY
- BioReference, Oculus; 185 Greenwich Street, Suite LL4330, New York, NY

- Quest Diagnostics, 8229 153rd Avenue, Queens, NY
- Quest Diagnostics, 98 John James Audubon Parkway Buffalo, NY
- Rapid Reliable Testing, 5 Times Square, New York, NY

A negative test result does not completely rule out the possibility of COVID-19 infection or mean that an individual is not at risk of contracting or spreading COVID-19. However, the initiative's screening and testing is another tool -- in addition to the use of face coverings, social distancing, and other protocols -- that can put New York businesses on track to reopen more safely at higher capacities. To learn more about the New York

Forward Rapid Test Program and view the Department of Health (DOH) guidance, visit the program's [website](#).

All participating testing providers have committed to rapid reporting of COVID-19 test results to DOH's electronic clinical laboratory reporting system (ECLRS, enabling integration with [Excelsior Pass](#) -- a free, voluntary platform developed in partnership with IBM, which utilizes proven, secure technology to confirm an individual's recent negative PCR or antigen test result or proof of vaccination to help fast-track the reopening of businesses and event venues in accordance with DOH guidelines.

New York has been at the forefront of developing testing capacity throughout the COVID-19 crisis, conducting more than 200,000 tests per day on average. Visit the Health Department's [website](#) to find a PCR or antigen testing site near you.
